

Pitman Training IT programme

The logo for Pitman Training, featuring the word "pitman" in a blue box above the word "training" in a white box with a blue border.

Pitman Training technical courseware has been developed to suit all students of varying knowledge and IT understanding. The aim of our courses is to allow anyone to learn or develop new IT skills that will be transferable into real world problems.

We offer:

A+ N+ Security+ CCNA MCP MCSA MCSE

The courses comprise a suite of training products and online services, bringing together the best features of instructor-led training, computer-based training and distance learning:

Course Manuals – the core material, whatever the method of study

Multimedia CDs – extra resources to aid independent learning

Online Mentoring – questions answered online by subject experts

Online Tutorials – regular, live, interactive, instructor-led sessions

Online Progress Testing – used to measure progress and highlight areas of difficulty

Online Exam Preparation – practice for exams leading to recognised qualifications

Virtual Labs – online access to specialised systems

Learning Management System – online tools to access records and manage training

Why choose the IT industry?

Well, it's here to stay. Our dependency on technology is going to grow and grow over the years and with it the demand for new recruits. If you are interested in computers and technology, you are already well placed to join the IT industry and start on the path to a successful and rewarding career.

Why get qualified?

Simple – it makes you stand out from the crowd. It proves you have attained a level of knowledge and expertise, and certification is a pre-requisite for many jobs. Who would you rather have working with you? Someone who says they can do it or someone who has had it certified that they can? As opportunities develop within a company, commitment to the individual becomes more important and Continuing Professional Development (CPD) is now seen as one of the major factors in staff retention.

Which course should I choose?

This is a bit more difficult. It will depend on where you see yourself and what your personal skills and ambitions are. Some of us are good at planning, others good at organising, some want to do practical work while others want to deal with the theory. Some want to deal with the hardware while others software. Wherever you fit there is a potential career for you. Please contact our advisors to discuss what may be your best course of action.

Why Choose Pitman Training?

People have the habit of associating our name with a shorthand system that was developed over one hundred years ago. Yes it is the same company – we are still delivering high quality training to people who work in the modern office. One hundred years ago shorthand was at the forefront of technology; today we are still here offering a range of IT skills for today's workplace. We have survived as a company all these years by adapting to changing technology and addressing the needs of people looking to develop their careers.

In our technical programme we try and create a commitment from the individual to their study plan, as it is all too easy to wander when undertaking a course of study. That is why we offer a mixed training environment that has elements of Instructor Led, Self Study and E-Learning, incorporated with support through our centres. Please contact our advisors for details on how we can work around your personal circumstances.

When should I start?

Do it now and don't wait for this opportunity to pass you by. Competition is likely to increase over the next five years, so as the next IT boom approaches be ready to take advantage of it!!

Will I Get that Job?

This is the most difficult question. It is not only your qualifications that count in the answer to this question. It may depend on a variety of issues regarding experience, previous work history and your suitability and aptitude for the position on offer. However, you improve your prospects beyond measure by being certified. Students have, over the years, looked at many ways of gaining experience while on their way to qualification, or have an employment history which gives them an understanding of a particular business sector into which they can develop their IT career.
